

# 8<sup>th</sup> Grade Year at a Glance

2019-2020

1 <sup>st</sup> Grading Period	2 <sup>nd</sup> Grading Period
<p><b>Real Numbers</b></p> <ul style="list-style-type: none"> <li>• <u>Calculator Skills and Operations</u> (review operations without calculator first)</li> <li>• <u>Scientific Notation</u> 8.2C (1 day exponent skills) convert between standard decimal notation and scientific notation</li> <li>• <u>Relationships between sets, approximating, and ordering real numbers</u> 8.2A extend previous knowledge of sets and subsets using a visual representation to describe relationships between sets of real numbers 8.2B approximate the value of an irrational number, including <math>\pi</math> and square roots of numbers less than 225, and locate that rational number approximation on a number line <b>8.2D order a set of real numbers arising from mathematical and real-world contexts</b></li> </ul>	<p><b>Finish Bivariate Data and Constant Rate of Change/Slope Functions</b></p> <ul style="list-style-type: none"> <li>• <u>Determine slope</u> <b>8.4C use data from a table or graph to determine the rate of change or slope and y-intercept in mathematical and real-world problems</b></li> <li>• <u>Represent linear relationships and Write an Equation (<math>y=mx+b</math>) using Verbal, Numerical, Tables &amp; Graphs</u> <b>8.5I write an equation in the form <math>y = mx + b</math> to model a linear relationship between two quantities using verbal, numerical, tabular, and graphical representations</b> 8.5B represent linear non-proportional situations with tables, graphs, and equations in the form of <math>y = mx + b</math>, where <math>b \neq 0</math></li> <li>• <u>Proportional vs Non-Proportional</u> 8.5F distinguish between proportional and non-proportional situations using tables, graphs, and equations in the form <math>y = kx</math> or <math>y = mx + b</math>, where <math>b \neq 0</math> 8.5H identify examples of proportional and non-proportional functions that arise from mathematical and real-world problems</li> <li>• <u>Identify, Represent Functions using Ordered Pairs, Tables, Graphs, and Mappings</u> <b>8.5G identify functions using sets of ordered pairs, tables, mappings, and graphs</b></li> <li>• <u>Intersection of Two Linear Equations Graphs</u> 8.9A identify and verify the values of <math>x</math> and <math>y</math> that simultaneously satisfy two linear equations in the form <math>y = mx + b</math> from the intersections of the graphed equations</li> </ul>
<p><b>Equations and Inequalities</b></p> <ul style="list-style-type: none"> <li>• <u>Review one and two step equations, combining like terms, distributive property, multi-step equations</u></li> <li>• <u>Model and Solve one variable equations with variables on both sides</u> <b>8.8C model and solve one-variable equations with variables on both sides of the equal sign that represent mathematical and real-world problems using rational number coefficients and constants</b></li> <li>• <u>Write one variable equations and inequalities</u> 8.8A write one-variable equations or inequalities with variables on both sides that represent problems using rational number coefficients and constants 8.8B write a corresponding real-world problem when given a one-variable equation or inequality with variables on both sides of the equal sign using rational number coefficients and constants</li> </ul>	<p><b>Financial Literacy</b></p> <ul style="list-style-type: none"> <li>• <u>Mean Absolute Deviation</u> 8.11B determine the mean absolute deviation and use this quantity as a measure of the average distance data are from the mean using a data set of no more than 10 data points</li> <li>• <u>Simulate Random Sampling</u> 8.11C simulate generating random samples of same size from a population with known characteristics to develop the notion of a random sample being representative of the population from which it was selected</li> <li>• <u>Calculate/Compare Simple and Compound Interest</u> <b>8.12D calculate and compare simple interest and compound interest earnings</b> Financial Decisions (8.12A – 8.12G)</li> </ul>
<p><b>Bivariate Data and Constant Rate of Change/Slope</b></p> <ul style="list-style-type: none"> <li>• <u>Bivariate Data</u> 8.5C contrast bivariate sets of data that suggest a linear relationship with bivariate sets of data that do not suggest a linear relationship from a graphical representation <b>8.5D use a trend line that approximates the linear relationship between bivariate sets of data to make predictions</b> 8.11A construct a scatterplot and describe the observed data to address questions of association such as linear, non-linear, and no association between bivariate data</li> <li>• <u>Direct Variation and represent linear proportional situations</u> 8.5E solve problems involving direct variation 8.5A represent linear proportional situations with tables, graphs, and equations in the form of <math>y = kx</math></li> <li>• <u>Develop slope and graph proportional situations</u> 8.4A use similar right triangles to develop an understanding that slope, <math>m</math>, given as the rate comparing the change in <math>y</math>-values to the change in <math>x</math>-values, <math>(y_2 - y_1)/(x_2 - x_1)</math>, is the same for any two points <math>(x_1, y_1)</math> and <math>(x_2, y_2)</math> on the same line <b>8.4B graph proportional relationships, interpreting the unit rate as the slope of the line that models the relationship</b></li> </ul>	<p><b>Final Exams</b></p>

# 8<sup>th</sup> Grade Year at a Glance

2019-2020

3 <sup>rd</sup> Grading Period	4 <sup>th</sup> Grading Period
<p><b>Transformations</b></p> <ul style="list-style-type: none"> <li>• <u>Similar Figures and Dilations</u> 8.3A generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation 8.3B compare and contrast the attributes of a shape and its dilation(s) on a coordinate plane <b>8.3C use an algebraic representation to explain the effect of a given positive rational scale factor applied to two-dimensional figures on a coordinate plane with the origin as the center of dilation</b> 8.10D model the effect on linear and area measurements of dilated two-dimensional shapes</li> <li>• <u>Transformations</u> 8.10A generalize the properties of orientation and congruence of rotations, reflections, translations, and dilations of two-dimensional shapes on a coordinate plane 8.10B differentiate between transformations that preserve congruence and those that do not <b>8.10C explain the effect of translations, reflections over the x- or y-axis, and rotations limited to 90°, 180°, 270°, and 360° as applied to two-dimensional shapes on a coordinate plane using an algebraic representation</b></li> </ul>	<p><b>Finish 3-D Figures</b></p> <hr/> <p><b>Readiness Standards Review</b> <b>Preparing for Algebra</b> <b>More in depth:</b></p> <ul style="list-style-type: none"> <li>• Slope</li> <li>• Linear Equations</li> <li>• Solving Equations</li> </ul>
<p><b>2D Figures</b></p> <ul style="list-style-type: none"> <li>• <u>Angles and Similarity</u> 8.8D use informal arguments to establish facts about the angle sum and exterior angle of triangles, the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles</li> <li>• <u>Pythagorean Theorem</u> 8.6C use models and diagrams to explain the Pythagorean theorem <b>8.7C use the Pythagorean theorem and its converse to solve problems</b> 8.7D determine the distance between two points on a coordinate plane using the Pythagorean theorem</li> </ul>	
<p><b>3D Figures</b></p> <ul style="list-style-type: none"> <li>• <u>Volume of cylinders, cones, and spheres</u> 8.6B model the relationship between the volume of a cylinder and a cone having both congruent bases and heights and connect that relationship to the formulas 8.6A describe the volume formula <math>V = Bh</math> of a cylinder in terms of its base area and its height <b>8.7A solve problems involving the volume of cylinders, cones, and spheres</b></li> <li>• <u>Surface Area of rectangular and triangular prisms and cylinders</u> <b>8.7B use previous knowledge of surface area to make connections to the formulas for lateral and total surface area and determine solutions for problems involving rectangular prisms, triangular prisms, and cylinders</b></li> </ul>
